Reason for allowance

The following is an examiner's statement of reasons for allowance: the prior art of records (USP. 6,232,810; 6,445,217) fails to teach or fairly suggest a flip-flop comprising an activation input to activate the flip-flop with an activation signal, the first and second switching elements being activated or inhibited, respectively dependent upon the clock signal, the data signal present at the data input, and the activation signal, causing information of the storage unit to remain stored independently of the clock signal present and the data signal present, in an event of a deactivated activation signals called for in claims 1 and 16. Therefore, claims 1-10 and 12-16 are presently allowed.
